THIRTY-SECOND ANNUAL REPORT

OF THE

REGISTRAR-GENERAL OF ONTARIO.

Toronto, Dec. 1st, 1902.

To the Honorable J. R. Stratton,
Registrar-General of the Province of Ontario:

Sir,—I have the honor to submit for your consideration the thirty-second Annual Report made under the Act respecting Births, Marriages and Deaths in the Province of Ontario, being for the year 1901.

Population

The populations utilized as the basis for estimating the various rates in this Report are those of the Canada Census of 1901, arranged by referring the enumeration districts of the census to the various county and district boundaries as they exist in the municipal system of the Province of Ontario.

These populations have generally been accepted as accurate and will serve as a basis for comparing the correctness of the data returned through the 774 division registrars of the Province with those collected by enumerators specially designated by the Census Bureau. The total population is 2,184,144, and as remarked in the report for 1901, shows the population increase during the decade to have been notably less than the estimated increase of 1 per cent. which this office assumed, representing the difference of births over deaths. The various causes affecting the growth of the population as represented by the rate of natural increase were referred to in the last Report and need not be repeated.

Births.

The total births registered in 1901 were 46,061, as compared with 46,127 in 1900. Table 1 of the report proper indicates the various increases and decreases by counties. In 15 counties there was a slight increase and in 28 there was a decrease. Carleton, including the city of Ottawa, shows an increase of 407, Prescott and Russell 201, Algoma 138, Grey 132, Nipissing 107, while the other increases were in all cases less than 100. The decreases have been more generally distributed, but are not large. Those above 100 were: Kent 138, Hastings 112, Northumberland and Durham 111, Bruce 104, and Simcoe 100. Comparing with these figures the births in cities found in table 2, it will appear that these have shown an increase of 193 over 1900, so that there has been a total decline of 259 in the municipalities not included under cities. The variation in the rate per 1,000 of births in different counties is remarkable, and of interest as illustrating movements of population. Algoma, for a new district, with 22.0 per

1,000 is disappointing, but when it is understood that a large number of men was there temporarily employed in railway construction and as lumbermen with homes elsewhere, the explanation of the relatively low rate is satisfactory. Haliburton, another frontier district, with a population of young settlers, shows naturally a high rate, 30.8 per 1,000. Parry Sound similarly with its rate of 28.1 and Muskoka with 29.1 are likewise satisfactory along with Renfrew with 28.2 per 1,000. Thunder Bay and Rainy River are disappointing for new districts; but as a matter of fact, the agricultural population is but small, it having been hitherto largely a more or less floating mining population. Its present rapid agricultural settlement will give a good opportunity for future comparison. The counties, whether old or new settlements, having a large French population again stand out prominently with their high birth rates. Carleton has 25.4, Essex 25.1, Nipissing has 40.4, Prescott and Russell 37.9. The phenomenon is interesting, but not unusual, if compared with new settlements as they grew up in the history of the old counties settled forty or fifty years ago, by European immigrants. The old-settled counties with no large towns cannot, for reasons before stated, be expected to increase in population, unless a more intensive system of agriculture be introduced. In keeping with the absence of increase in births in such counties is to be noted, the fact that in 31 towns, mostly county towns, as seen in table 3, 12 only showed an increase, the balance showing a decrease. Had Owen Sound not had 127, or more than half the increase in towns with any increase at all these towns would have shown a decrease in births of 402 instead of only 36.

It therefore appears that apart from other influences, whether social or moral, which may affect birth rates, it would seem that old agricultural communities will have low birth rates, which are even accentuated in old villages and small towns, which are not increasing, though they may do so with the introduction of factories. Hence, it must be to the growth of population on our virgin lands in new Ontario and to the development of manufacturing industries in the cities and towns that we must look for an increase in population. Massachusetts presents the most marked example of what Ontario must become as new settlements grow up in western Canada. Thus the 2,238,907 in 1890 has increased to 2,805,346, or a total of 566,439 in 1900, or an urban increase of 76 per cent., with a similar urban increase between 1880 and 1890 of 69 per cent.

Birth Rate in Cities.—As already remarked, the increase in these has not made up for the decrease elsewhere. Ottawa with 315 alone shows a satisfactory increase in keeping with the total increase of population as per the assessors' returns. Apart from this, the increases were but 105, while the decreases were 225. There are two explanations, first, that the births have not occurred, or, second, that they have not been registered. In table 2 the different rates per 1,000 are set forth. Thus Ottawa has 27.5, while Toronto has 21.4, and Windsor 21.2. Hamilton and London have 18.7 and 18.6 respectively, while Brantford, a smaller city, has 25.4. Kingston, a city which has not increased, has 17.8 as compared with St. Thomas, a growing city, with many factories, with only 17.1. Again, Belleville, a city where the population has declined, having 17.1, may be compared with Stratford, a city with large workshops, with only 17.4. These comparisons amply illustrate what has in other ways been demonstrated, that the returns in both cases hold a distinct relationship to the activity of the particular division registrar in obtaining the registration of the births which have occurred.

Marriages

The total marriages reported during the year 1901 were 18,035, as compared with 17,017 in 1900, or an increase of 928. The rate, 8.2 per 1,000, must be considered high, and as an indication of prosperity extremely satisfactory. The rate is especially high in cities, being 11.5 per thousand. This is, however, quite abnormal, being rendered so by the 835 marriages celebrated in Windsor, amounting to 68.5 per 1,000. Eliminating this from the total for the Province we have still a marriage rate of 7.9, while in the cities, which, including Windsor, give 11.5 per 1,000, there is a rate of 10.0 without it. The following table giving the marriages returned during several past years is of interest :

Marriages in Ontario.

1891	14,159	1897	15,293
1892	14,482	1898	15,375
1893	14,475	1899	16,414
1894	14,341	1900	17,107
1895	13,987	1901	18,035
1896	14,904		

The table is of much interest, illustrating equally a positive increase in marriages since 1896, and also a very notable and steady increase in the completeness of the returns. They may now be considered absolutely complete, checked as they are by the returns of marriage licenses made to the office, and the practical abandonment of publication of banns. Any such, if published, of course, are known to the local registrar. By corresponding with 51 clergymen, 441 returns previously unregistered were obtained, and only a few licenses were issued, of which assumed marriages no information has been obtained.

With a marriage rate, as seen in the following table, equalling almost that of the highest of other countries, it is apparent that the birth rate should be approximately that of such countries.

Table Showing Marriage Rate per 1,000

England and Wales (1900)	8.0	German Empire (1899)	8.5
Scotland (1900)	7.31	Massachusetts	8.6
Ireland (1897)	5.03	Michigan (1899)	9.0
Denmark (1899)	7.5	Connecticut (1899)	7.6
Sweden (1899)	6.2	Quebec (1900)	6.0
Switzerland	7.5	Ontario	8.2

The figures illustrating this high marriage rate in Ontario are fully borne out by the Canada Census returns for 1901.

The following table gives the proportion of unmarried to married persons in the several Provinces, and, for comparative purposes, in Ireland, which has a phenomenally low rate:

Table Showing Percentage of Married and Unmarried Persons, as per Census of 1901.

	Per Cent.		Per Cent.
Ontario—Married	Males 34.9	Unmarried	Males 61-8
	Females 35.3		Females 58.2
Quebec—Married	Males 33.6	Unmarried	Males 63.6
	Females 33.1		Females 61.8
Manitoba—Married	Males 30.9	Unmarried	Males 68.7
	Females 35.7		Females 60.8
Nova Scotia—Married	Males 32.9	Unmarried	Males 64.2
	Females 32.3		Females 59.2
Ireland (Cen. 1901)—Married,	Males 26.0	Unmarried	Males 63.6
	Females 26.0		Females 61.8

The table is made still more interesting and instructive by the further comparison of the ratio of the population under fifteen years to the total since it will explain why in some Provinces quite notable differences exist.

Table Showing Proportion of Population Under Fifteen Years, as per Canada Census, to Total Population.

Ontario—Population under 15 years	31.34
Quebec—Population under 15 years	38.69
Manitoba—Population under 15 years	38.30
Nova Scotia—Population under 15 years	33.78
Ireland—Population under 15 years	30.35

The apparently high percentage of married persons in Ontario is affected by the fact that a disproportionately large population is over fifteen years of age.

The following table refers to the population of fifteen years and over.

Table showing Percentage of Marrie l Persons in Population of Fifteen Years and Over.

	Males. Per Cent.	Females. Per Cent.
Ontario	51.7	51.3
Quebec	55.0	54.1
Manitoba	43.3	60.7
Nova Scotia	49.0	41.0
Ireland (Census 1901)	38.25	37.09

These tables do not include in their calculation either widowers or widows, which do not in practice affect the percentages. We see from them that the slightly higher percentage of married persons to the whole, as seen in the first table, is due to the fact of there being a smaller percentage of population under fifteen years. It is apparent, therefore, that a comparison of the percentage of marriages is most accurately obtained by estimating them on the basis of population of fifteen years and over. The Province of Quebec, then, is seen to exceed Ontario, and, indeed, all the other Provinces, in this, except Manitoba, where the percentage of women married is highest. The influx of a large male population of settlers, many of whom are young men, may well explain this fact.

The natural increase, based upon so high a marriage rate, should manifestly naturally exceed that already given in the births returns, as well as by comparative figures for other countries. Thus Quebec, with a population of 1,648,898, shows by the census returns 50,342 children under one year of age, or with a population 533,246 less, it has 3,619 children more than Ontario, or 50,342 to 46,413, or a rate of 30.6, compared with 21.1 in Ontario.

The approximate correctness of the birth returns may be estimated by comparison with the returns for 1901. The Census gives 46,413 children under one year of age, while the Ontario registration records give 46,061. To show further that Ontario's rate is much too small, it may be stated that the fertility of the marriages registered in Scotland in 1894, estimated in 1900, shows that 445 children were born for every 100 marriages, or a fertility rate of 4.45 per marriage. The returns for January, February and March, 1901, are included in both, but the Census is in the other nine months for 1900, while the registration returns are for 1901.

Marriages in Cities. These are given in table 2, and show that, apart from Windsor, the cities of Chatham and St. Thomas, with 15.0 and 12.9 respectively, have the highest rates in the Province. It is not improbable

that, being relatively near the Border, the marriage ratio is affected by the same influences as at Windsor. Toronto and Belleville, with 10.3, and Kingston, with 10.2, follow next in order, while Guelph, with 8.2, is the lowest. Amongst the towns, as found in table 3, the influence of Border conditions is seen to prevail. Thus, Niagara Falls has a rate of 22.1, and Sault Ste. Marie has 17.0. But frontier towns everywhere have high rates. Persons from the new settlements go to points where licenses and the services of clergymen are readily available. Thus Bracebridge has 16.5, L'Orignal 15.6, Lindsay, 13.3, Napanee 21.0, North Bay 14.6, Owen Sound 19.1, and Sarnia 15.4. The Border towns, along with the city of Windsor, as has before been remarked, must continue to create a marked excess over the normal marriage rate; but as the Marriage Act is at present administered by both license issuers and clergymen, there seems little hope of any marked improvement taking place.

Deaths

The total deaths recorded in Ontario in 1901 were 29,608, showing a decrease over the previous year of 114, and giving a rate of 13.6 per 1,000. As it is believed the returns are practically complete, the rate must be considered low. Since 1896, when the Amended Act was passed, the deaths have been:

1896	24,857	1899	28,607
1897	27,633	1900	29,494
1898	26,370	1901	29,608

The Report for 1900 entered quite fully into a comparison of the deaths in 1891 and 1900. The death-rate in the different age-periods in each year was compared, and the influence of a disproportionate population belonging to the later periods upon the general death rate was shown by tables. Table 10 again illustrates the same fact. Thus there were:

	Deaths.
Between 60 and 69 years	3,036
Between 70 and 79 years	4,051
Between 80 and over	3,336
Total	10.423

Or 35 per cent. of the total deaths were of persons of three-score or more years. There were 6,543 deaths of children under one year, or 22 per cent. of the whole, all still-births being included. The years of life, from one to 59, including a population of over 1,964,000, had a death rate of 6.9 per 1,000. As shown in the Report for 1900, the mortality during school-age has in recent years very notably decreased. The table may again be repeated:

Table of Deaths by Age-Periods.

—	1891.	1900.	1901.
1 to 4 years		1,089	1,854
5 to 9 "	1,544	803	816
10 to 14 "	722	563	571
15 to 20 "	740	941	897
20 to 24 "	876	1,257	1,182
25 to 29 "	911	1,083	1,099
30 to 39 "	1,423	1,908	1,993
40 to 49 "	1,270	1,819	1,909
50 to 59 "	1,386	1,931	2,135
60 to 69 "	1,843	2,949	3,036
70 to 79 "	2,214	3,825	4,051
80 and over	2,224	3,099	3,336

A comparison may with interest be made of the percentage to the whole of the deaths in each age-period of the deaths in Ontario in 1901 and in Scotland in 1900.

Percentage of Deaths by Age-Periods to Total Deaths.

—	Scotland.	Ontario.
	Per cent.	Per cent.
0—1 year	*	22.0
1 to 4 years	32.06	6.2
5 to 9 "	2.74	2.7
10 to 14 "	1.76	1.09
15 to 19 "	2.44	2.00
20 to 30 "	6.60	7.00
30 to 40 "	6.54	6.7
40 to 50 "	7.78	6.7
50 to 60 "	9.72	7.0
60 to 70 "	11.92	10.0
70 to 80 "	11.77	13.7
Over 80 years	7.19	11.2

* Included in 1 to 4 year period.

The relatively small percentage of deaths in infancy and in the first five year period in Ontario is made apparent in the table, while the larger number of deaths over 70 pears is equally evident.

Deaths by Counties in Ontario. Table 1 contains the rate for each of the 44 counties. There are quite notable variations, as have been apparent in previous years, dependent upon variations in age of population, occupation, presence of a city in the county, as well as climatic and soil influences. The same county has followed closely its death rate of 1900. The lowest county rates are found in Rainy River with 9.2, Parry Sound 10.2, Algoma 10.3, Bruce with 11.3, Dufferin 11.3, Haliburton 11.1, Hastings 11.4, Huron 11.8, Muskoka 11.2, Simcoe 11.2, Waterloo 11.8, and Thunder Bay 11.2, all included in a group of counties, which have relatively a young population, being amongst the counties more recently settled. Carleton, with 18.8, shows the influence of a large laboring population; Frontenac, with 14.6, has Kingston and an old settled population without any notable increase. Leeds and Grenville, with 14.5, shows the influence of the same conditions. Lincoln, with 20.1, is influenced in the same manner, with St. Catharines as a city centre. Nipissing has a large birth rate of 40.4, and a death rate of 17.2 in keeping therewith. Prescott and Russell, with a birth rate of 37.9, follows the same law, with a death rate of 18.1, while Prince Edward, with its death rate of 15.5, shows markedly the effect of the presence of an old population, the birth rate being 13.8, or lower than the death rate. The Census showed a county decrease of 1,025, in spite of the natural increase through births. York, including the city of Toronto, shows a low rate, remembering the presence of a large city.

Deaths by Cities. Table 2 gives the deaths in the fourteen cities of Ontario. Ottawa is abnormally high, 22.7, caused chiefly by the presence of an abnormal number of hospital and charitable institutions, the House House of Bethlehem alone returning 100. Kingston also is abnormal, being 21.0, and shows the effect of a stationary or decreasing population, there being 1,302 less, according to the last Census, than in 1891. Stratford and St. Thomas have the smallest death rates, being 13.9 and 13.6 respectively. Brantford, in proportion to the birth rate, has the best showing of any city

for, with a birth rate of 25.4, but 2 per 1,000 less than Ottawa, it has a death rate of only 15.5. Guelph, with 13.6, has also, for a city which has not greatly increased, a fairly satisfactory birth rate of 19.6 per 1,000.

Amongst the towns, Owen Sound leads, with the death rate of 26.9. While the Census and municipal figures are closely in agreement, the result of this will likewise be abnormally high births, 34.1, marriages, 19.1, and indicates that the growth of the town population has notably exceeded the figures given, and, hence, the division is too small.*

Other towns, as Welland with 23.6, Perth with 22, and Brampton with 26.5, show, probably a too high rate, owing to deaths from surrounding municipalities being registered therein.

Deaths by Classes of Disease. Comparison, owing to re-arrangement of the classes of disease under the Bertillon system, enables comparison to be made only with 1898, 1899 and 1900. The class of communicable (epidemic) diseases shows 2,590, as compared with 2,255 in 1900, 2,460 in 1899, and 1,709 in 1898; but other general diseases show 5,327, as compared with 5,559, indicating a more exact definition of diseases in the returns. Diseases of the nervous system show 3,421, as compared with 3,597; diseases of the circulatory system give 2,122, as compared with 2,004; diseases of the respiratory system give 3,547, as compared with 2,995; while those of the digestive system were 2,316, as compared with 3,425. The great falling off is due, in large measure, to the remarkable mortality from diarrhoeal diseases in August, 1901.

Class XI., including a large number of ill-defined diseases, is 6,994, as compared with 6,509 in 1900. The class of accidents is much the same as in 1900, being 1,092, as compared with 1,042.

The deaths from diseases by classes, in cities and in towns, will be found in tables 11 and 12.

Deaths From Typhoid Fever. The deaths from this disease were 500, as compared with 682 in the previous year. The deaths in 1899 were the highest since 1891, due, as before stated, to the exceptional character of the weather during the later autumn. The total deaths in cities were 115, and in the towns 37. As the population in the cities and towns is as 1 to 3.5, it appears that the mortality was very evenly distributed in town and country. It is remarkable that, excepting York with .49, Algoma with .26, had the highest number of deaths from this disease; while its total mortality rate was but 10.3, or, with the exception of Rainy River, the lowest in the Province. Sault Ste. Marie had 14 of the total. The sudden influx into that growing town, and its being the point to which persons sick must be sent from the large railway camps in the neighborhood, were the causes for this unusual number. On the other hand, the Rainy River District, with a large number of men on railway construction, seems to have been unusually healthy, only three deaths being recorded.

The remarkable immunity of the cities and towns with public water supplies is of interest, the total in fourteen cities being 115, the rate being but 0.32 per 1,000. It is known that a number of the newer cities have still well water in the suburbs, and in every instance analyses of the health reports connect the typhoid with such water. The city rates are also increased by the fact of typhoid being a disease very frequently sent into the hospitals from surrounding districts in the counties.

The intimate relationship between water and typhoid is well illustrated by the remarkable showing of Massachusetts, where, with an urban population of 76 per cent., in 1900 the total deaths were 632, in a population of 2,805,348, all water supplies being very carefully supervised by the

* There is reason to believe that the returns were improperly made.

State Board of Health. Scotland, with a population of 4,472,000, had in 1900 only 614 deaths, or .14 per 1,000. In England there were 5,591 deaths in a population of 32,526,075, or .173 per 1,000. Thus, the urban rate, though low, yet indicates defects which still leave room for improvement, especially in rural sanitary conditions.

Deaths from Smallpox. There were 7 recorded for the Province in a total of some 3,000 cases. The type of disease has been discussed at length in the Annual Report of the Provincial Board of Health for 1901, and its bearing upon the phenomenally low mortality was then set forth. The disease at the time of writing, in the end of 1902, is still largely of the mild type.

Deaths from Measles, Scarlatina and Whooping Cough. These diseases have come to have what seems an almost permanent character for mildness. The deaths were respectively, 181, 268 and 166. In 1900 they were 143, 170 and 185. Scarlet fever, of the three, shows a very definite increase.

Deaths from Diphtheria and Croup. The deaths from these diseases were 772, as compared with 738 in 1900. Both years have shown an increase from 634 and 599 in the two previous years. It would appear that, for some reason, the very marked downward tendency of this disease since 1894, when the deaths were 1,075, has been checked. The same observation has been made in several neighboring States, and demands investigation by health authorities. Contrary to typhoid fever, this disease is markedly a disease of dense populations, as seen in the fact that in the fourteen cities the deaths were 312, approaching three-sevenths of the total. Toronto leads with 174.

1895	147	1899	103
1896	132	1900	179
1897	161	1901	174
1898	63		

Ottawa shows a still higher death rate, there being 60 deaths in 1901, as compared with 45 in the previous year. Hamilton had 28, as compared with 21 in 1900, while London has increased from 9 to 22. Kingston has 4, as compared with 2 in 1900. Brantford 4, as compared with 1. The balance of the cities have, however, only 20, as compared with 23. Thus it appears there has been a general upward tendency in the cities, while in the rural districts there has been, on the whole, a decrease.

The mortality from the disease has shown in most countries very remarkable decreases since 1894. In a population of 21,327,275 in 1,435 cities and towns of the United States, there were in 1901 8,477 deaths from diphtheria, or a rate of .4 per 1,000 population. It will be seen that the Ontario rate of .32 per 1,000 compares favorably with this total.

Deaths from Influenza. This disease had a death rate of 694, as compared with 324 in 1900 and 990 in 1899. While the specific character of Russian influenza, or la grippe, is undoubted, it would appear that the name serves to include a certain number of diseases roughly diagnosed, and which for lack of care are placed under this head. Its prevalence during January and February are well marked.

Deaths from Pyaemia and Septicaemia. The deaths included in this group were 572, as compared with 558 and 241 in 1899. Whether on account of the increased accuracy in the definition of disease, or not, it is apparent that these diseases show a quite notable increase. Assuming the correctness of diagnosis, it is apparent that they tend to move along the lines which

show cancer as rather increasing. These diseases show certain tendencies in the broad influences which affect the nutrition of the individual, seeming to make him more liable to diseases showing degeneration of tissues, which become of much interest in their influence on mortality.

Deaths from Cancer. There were 1,094 deaths from this disease, as compared with 1,055 in 1900. The deaths from 1897 have increased, being 927, 975 and 1,041 for 1897, 1898 and 1899, but they show no relative increase beyond increase of population. The reasons why from 1891 to 1901 there has been an increase were discussed in the Report for 1900. Their relation to old age, and the relatively high proportion of deaths of old people to the total deaths, has been already dewlt upon.

Deaths from Tuberculosis. The deaths from this disease were 3,243, as compared with 3,484 in 1900, thus showing a decline of 241. This is gratifying, as being the first time for several years in which the deaths from the disease have not increased. Since 1897 the deaths have been:

1897	3,154	1900	3,484
1898	3,291	1901	3,242
1899	3,405		

In the cities the totals for 1901 were 994, as compared with 1,081 in 1900, or a decrease of 87.

The decline seems to have been general, as may be seen in the following table:

Deaths from Tuberculosis in Cities of Ontario.

—	1900.	1901.	Decrease.
Toronto	497	489	8
Hamilton	108	95	15
Ottawa	142	139	3
London	67	57	10
Kingston	58	50	8
Brantford	40	35	5
Guelph	20	17	3
St. Catharines	27	26	1
Belleville	28	12	16
Stratford	18	14	4
Windsor	29	20	9
Chatham	18	12	6
Woodstock	18	9	9
St. Thomas	11	19	Increase—8

Thus, as seen, St. Thomas is the only city in which a decline is not seen. As the diseases of the respiratory system were 955, as compared with 879, it would seem that the decrease has been due to the influence of the education of the people in the measures of prevention against this communicable disease.

The rate per 1,000 for the Province was 1.49; for the cities, 2.09; and for the towns, 1.01; making the rate for the rural districts, 1.33.

The distribution of the disease by counties has been before remarked upon, but the notable differences may again be illustrated.

Deaths in Ontario from Tuberculosis by Counties, giving Rate per 1,000.

Algoma	3.06	Essex	1.50
Brant	1.04	Frontenac	1.76
Bruce	1.11	Grey	0.90
Carleton	2.34	Haldimand	1.20
Dufferin	0.80	Halton	0.78
Elgin	1.39	Haliburton	1.70

Deaths in Ontario from Tuberculosis—*Continued.*

Hastings	1.14	Perth	1.03
Huron	0.94	Peterborough	1.00
Kent	1.34	Prescott and Russell	1.59
Lambton	1.89	Prince Edward	1.65
Lanark	1.16	Rainy River	3.33
Leeds	1.89	Renfrew	1.00
Lennox and Addington	1.70	Simcoe	1.10
Lincoln	1.50	Stormont, Dundas and Glengarry	1.46
Middlesex	1.20	Thunder Bay	2.54
Muskoka	2.00	Victoria	1.00
Nipissing	3.25	Waterloo	1.10
Norfolk	1.10	Welland	1.21
Northumberland and Durham	1.01	Wellington	1.06
Ontario	1.17	Wentworth	1.40
Oxford	0.94	York	1.71
Peel	1.33		

From the table, it becomes apparent, as has been noted before, that the prevalence of tuberculosis varies greatly for different counties. The group of the central western plateau still retains its pre-eminence as having a low death rate. Thus, Bruce has 1.11, Dufferin 0.80, Huron 0.94, Middlesex 1.20, Perth 1.03, Oxford 0.94, Waterloo 1.10, and Wellington 1.06. Similarly, the group on the clay lands of the two peninsulas still maintains a higher rate. Thus Essex has 1.50, Kent 1.34, Lambton 1.89, Lincoln 1.50, and Welland 1.21. The latter group, however, within recent years, with more drainage, has distinctly improved, the rate in most cases not exceeding the average. Halton, again, shows an improvement, and has, with 0.78, the lowest rate in the Province.

The Eastern St. Lawrence counties, with Leeds and Grenville 1.89, Stormont, Dundas and Glengarry, with 1.46, are still high, but, likewise show an improvement over past years. Frontenac, with 1.76, and Lennox and Addington, with 1.70, and Prince Edward, with 1.65, retain an unduly high rate. Hastings has, however, notably decreased from 1.7 to 1.14. Those counties including the large cities have still high death rates, Carleton having 2.34, York 1.71, and Wellington 1.40.

What is most remarkable, however, is the fact that Algoma, with 3.06, Muskoka with 2.00, Nipissing with 3.25, Rain River with 3.33, Thunder Bay, with 2.54, and Haliburton have this year greatly exceeded the normal, and, indeed, show an alarming proportion of deaths from this disease. It illustrates how in small populations, whose occupations have changed so rapidly within a few years from agricultural and lumbering to those of town centres, mining popuations and railway construction, the results of dangerous occupations should so soon be seen in the death rate. Racial influences, too, may, in part, have some influence upon the high rate.

The variations in the cities of the Province are seen in the following table:

Table Showing Death Rate per 1,000 in the Cities of Ontario.

St. Catharines	2.8	Windsor	1.64
Kington	2.79	Guelph	1.56
Toronto	2.35	London	1.50
Ottawa	2.32	Stratford	1.40
Brantford	2.10	Chatham	1.32
Hamilton	1.80	Belleville	1.30
St. Thomas	1.65	Woodstock	1.02

It will appear that marked variations in prevalence are found in the large centres, and are similar to the figures of 1900. Toronto and Ottawa

maintain the same rate, Kingston shows a small decline from its enormously high rate, St. Catharines shows the same abnormally high rate, Brantford has rather improved, and London, also, has declined, while Belleville shows a remarkable decline, from 3.0 to 1.30. Chatham, similarly, has notably declined, while St. Thomas has risen from 0.9 to 1.65. Woodstock from 2.0, has decreased to 1.02, and Stratford has fallen from 1.8 to 1.40. Guelph, also, has decreased from 1.76 to 1.56, and Windsor has fallen from 2.3 to 1.64.

Total deaths in Toronto from tuberculosis and scrofula, 489; 202, or 41.30 per cent., of which happened in those over 15 years.

Total deaths from other diseases of respiratory system, 410 150, or 36.58 per cent., of which happened in those over 15 years.

Tuberculosis in Different Occupations. The influence of occupation upon the general health has frequently been made the subject of study, but, in view of the difference in the ages of the employees, of social and climatic factors, it has been more or less difficult to definitely ascribe certain results to specific causes. An attempt has been made in the preceding table to classify deaths according to occupations in Toronto, as they relate to tuberculosis and lung diseases.

Of the 105 occupations of persons from the list dying in 1901, there were 21 occupations, having 60 deaths, of which none was from lung disease, and 31 in which no death from tuberculosis took place. The total deaths over fifteen years of age form 60 per cent. of the total deaths in the cities, hence, of the 3,422 total deaths in Toronto, 2,053 were fifteen years or over. Of the number, where the occupation was given, 352 occurred from tuberculosis or other forms of lung diseases. 202 being from tuberculosis, or 44.0 per cent. of the total .450 due to tuberculosis, and 150, or 36.5 per cent. of the total diseases of the respiratory organs. There were, at all ages, 459 deaths from tuberculosis, and 410 from all respiratory organs, or together 26.3 per cent. of all deaths were due to diseases included in these two classes.

The percentage prevalence of the disease in the different occupations to those engaged in it cannot be obtained; but it is apparent that the great proportion of deaths from tuberculosis has occurred in the wage-earning classes.

There were 13 deaths of males and 4 of females amongst clerks, while farmers and painters followed with 9 each. Commercial travellers had 5 deaths, while there were 4 in each amongst barbers, butchers, builders, carpenters, factory hands, printers, students and shoemakers.

Amongst female servants there were 10, and 36 were returned as housewives. Other classes have several in each, making up a total of 140 men and 62 women, whose occupations have been returned. While a complete list of occupations would be yet more valuable, the fact remains that some would be daughters and sons, who have not yet had any occupations, while others were ill so long that they had not recently been employed. Such are reasons why the particulars have not been more generally returned.

Deaths by Occupations in Counties. The preceding table gives a summary of deaths by occupations and counties for the Province. The study would become more interesting if an approximate estimate of the number of persons engaged in each occupation were available. When the Census tables of 1901 are completed such data will be available, and the study of the table, comparatively, will then be possible.

There are several obvious conclusions to be drawn from it, such as the very general distribution of deaths amongst farmers at all the life-periods over fifteen years, and the very large number of them in the decades 60 to 70, 70 to 80 and over. Others, again, such as female servants, show either that an unusual number die in the earlier periods, or what is a known fact, that they disappear in large measure from the class, and their deaths will subsequently be found. Again, the distribution of deaths by ages of house-

wives institutes an interesting comparison with deaths amongst farmers. As it includes housewives in urban as well as rural municipalities, it is evident that the relative ages of men and women on the farm cannot accurately be established. The relative healthfulness of housewives in country and town may perhaps be judged by comparing the county tables, which include the whole, with the individual Toronto table.

The relative healthfulness of an occupation, as, for instance, clerks and seamstresses, must in every instance be estimated upon the average age at which the greatest number of persons are engaged in the occupation.

Deaths from Other Classes of Disease. None of the other classes or individual diseases call for any special consideration. The high mortality rate from diarrhoeal diseases in 1900 was reduced by nearly one-third in 1901, but organic heart disease increased from 1,249 to 1,387, broncho-pneumonia from 1,568 to 1,926, while Bright's disease has remained stationary, being 650, as compared with 656 in 1901, although dropsy increased from 239 to 281. In 1900 there were 11 cases of lockjaw and 20 in 1901, while anthrax caused 2 deaths in 1900, but 1 in 1901.

In many respects, the mortality of 1901 may be looked upon as representing an average year, in which no disease played a part of unusual prominence. The indications as to the direction in which measures of sanitation may properly be taken are again plain, while the direction which the self-education of the public must take in lessening the prevalence of diseases so directly related to nutrition, and the avoidance of excesses, whether business, social or moral, is made abundantly plain by the mortality from tuberculosis. These are as essential measures of prevention as the more direct ones, which may be instituted by legalized public health measures.

Respectfully submitted,

P. H. BRYCE,
Deputy Registrar-General.

TABLE No. 14.

Total Deaths by Individual Diseases in Cities in 1901.

General Diseases.	Toronto.	Hamilton.	Ottawa.	London.	Kingston.	Brantford.	St. Thomas.	Guelph.	St. Catharines.	Belleville.	Stratford.	Windsor.	Chatham	Woodstock.	Totals.
I.—Communicable (Epidemic) Diseases.															
1. Typhoid Fever	37	10	13	6	7	6	2	..	8	1	6	5	9	5	115
2. Smallpox	1	..	1	..	..	..	..	..	..	..	..	1	..	..	3
3. Measles	8	..	32	3	..	..	..	..	..	1	..	..	..	..	44
4. Scarlet Fever	37	4	64	1	7	..	1	2	1	..	..	1	1	1	120
5. Whooping Cough	25	6	8	..	2	..	..		..	1	1	1	..	..	44
6. Diphtheria and Croup	174	28	60	22	4	4	1	..	2	2	3	..	4	8	312
7. Influenza	56	8	6	10	7	5	7	5	..	3	2	3	9	1	122
8. Other Epidemic Diseases	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..
II.—Other General Diseases.															
1. Pyæmia and Septicæmia	64	10	19	10	14	5	7	3	7	9	3	8	1	1	161
2. Malarial Fever	..	..	..	..	..	..	..	..	..	..	..	..	..	..	..
3. Tuberculosis and Scrofula	489	95	139	57	50	35	19	17	26	12	14	20	12	9	994
4. Syphilis	5	1	4	..	..	..	..	..	..	..	..	..	..	..	10
5. Cancer	163	39	36	28	14	7	11	8	8	10	3	3	12	8	350
6. Rheumatism and Gout	16	3	5	2	..	3	..	..	..	..	1	..	..	1	31
7. Diabetes	14	1	6	6	5	2	1	2	..	3	..	2	1	2	45
8. Other General Diseases	4	..	2	1	1	1	..	..	..	..	..	..	..	..	9
9. Alcoholism, Acute and Chronic	2	1	..	1	..	..	..	..	..	..	..	1	..	..	5
LOCAL DISEASES.															
III.—Diseases of Nervous System and Organs of Sense.															
1. Encephalitis	10	2	4	7	..	4	2	1	1	1	2	2	1	2	39
2. Simple Meningitis	62	10	26	9	7	4	..	2	1	2	2	3	1	1	130
3. Epidemic Cerebro-Spinal Meningitis	14	3	4	5	1	3	3	1	..	1	..	2	..	..	37
4. Congestion and Hemorrhage of the Brain	135	34	21	18	10	10	1	10	5	12	2	14	2	3	277
5. Softening of the Brain	13	4	2	2	1	..	2	..	1	..	..	..	1	..	26
6. Paralysis without specified cause	73	16	26	30	16	4	11	9	4	6	2	8	4	4	213
7. Insanity	11	..	1	3	..	..	..	1	..	..	..			..	16
8. Epilepsy	12	2	1	1	1	1	..	..	..	..	1	1	..	..	20
9. Convulsions (not puerperal)	63	10	89	27	6	7	2	4	2	2	..	6	2	..	220
10. Other Nervous Diseases	3	..	1	1	..	1	..	..	..	..	..	1	..	..	7
IV.—Diseases of Circulatory System.															
1. Pericarditis	2	..	1	1	..	..	..	..	..	..	..	..	1	..	5
2. Endocarditis	15	5	1	3	1	1	..	..	..	..	1	1	..	2	30
3. Organic Heart Diseases	191	51	54	28	18	12	8	12	9	12	6	12	7	10	430
4. Angina Pectoris	5	1	3	..	2	1	..	..	..	3	..	..	..	2	17
5. Diseases of the Arteries, Atheroma, Aneurism, etc.	12	1	..	..	1	1	..	1	..	..	..	..	..	1	17
6. Other Diseases of the Circulatory System	28	14	12	4	4	5	4	..	1	..	3	2	3	2	82
V.—Diseases of the Respiratory System.															
1. Acute Bronchitis	51	11	26	13	2	4	2	2	3	..	..	2	1	..	117
2. Chronic Bronchitis	42	8	8	4	3	1	1	2	1	5	..	6	2	5	88
3. Broncho-pneumonia	59	24	15	2	2	..	..	7	..	..	1	2	1	4	117
4. Pneumonia	216	83	58	48	30	12	9	9	16	10	12	5	14	9	531
5. Pleurisy	6	2	2	3	..	..	1	..	..	..	2	..	..	..	16
6. Congestion of the Lungs (including Pulmonary Apoplexy)	16	2	5	8	2	1	1	..	2	1	2	..	1	6	47
7. Asthma and Emphysema	19	1	3	4	3	..	1	1	2	..	..	..	2	2	38
8. Other Diseases of the Respiratory System	1	..	..	..	..	..	..	..	..	..	..	..	..	..	1
VI.—Diseases of the Digestive System.															
1. Ulcer of the Stomach	2	1	1	1	..	1	..	1	..	..	..	..	..	..	7
2. Other Diseases of the Stomach (Cancer excepted)	16	4	3	3	1	2	3	1	..		1	1	..	1	36
3. Infantile Diarrhœa and Gastro-enteritis, ("Cholera Infantum")	111	18	149	19	19	6	6	4	9	5	4	4	1	3	358
4. Diarrhœa and Enteritis (not infantile)	9	4	9	..	3	2	5	..	2	2	1	1	2	..	40
5. Dysentery	8	1	3	1	..	..	1	..	..	..	..	..	1	..	15
6. Hernia and Intestinal obstructions	13	5	7	3	3	2	..	3	1	1	..	1	..	..	39
7. Other Diseases of the Intestines	6	1	2	1	1	..	1	1	1	..	..	..	..	..	14
8. Diseases of the Liver	22	2	12	7	4	4	1	1	1	..	2	2	3	1	62
9. Peritonitis (not peurperal)	37	10	7	2	1	2	1	..	2	2	1	3	..	5	73
10. Iliac abscess (typhlitis, perityphlitis, appendicitis)	26	8	4	7	2	1	1	3	5	..	2	1	1	..	61

TABLE No. 14.—*Concluded.*

General Diseases.	Toronto.	Hamilton.	Ottawa.	London.	Kingston.	Brantford.	St. Thomas.	Guelph.	St. Catharines.	Belleville.	Stratford.	Windsor.	Chatham.	Woodstock.	Totals.
VII.—Diseases of the Genito-Urinary System.															
1. Acute Nephritis	15	4	4	4	..	1	..	..	1	..	..	1	..	1	31
2. Bright's Disease	93	41	16	16	12	10	2	3	1	5	3	5	3	2	212
3. Other Diseases of the Kidneys and Adnexa	1	..	1	2	..	..	..	1	..	..	..	..	..	..	5
4. Vesical Calculi	2	..	..	1	..	..	..	..	..	..	..	..	..	..	3
5. Diseases of the Bladder	21	2	4	5	2	1	1	..	..	..	..	3	..	..	39
6. Diseases of the male Genital Organs	....	..	....	..	..	..	..	..	..	..	..	..	..	..	.....
7. Metritis	....	..	....	..	..	..	..	..	..	..	..	..	..	..	.....
8. Other Diseases of the Uterus	....	..	....	..	..	..	..	..	..	..	..	..	..	..	....
9. Ovarian Cysts and other Ovarian Tumors	....	1	....	..	..	..	..	..	..	..	..	..	..	..	1
10. Other Diseases of the Female Genital Organs	3	1	....	..	..	..	..	1	..	..	..	..	1	..	6
VIII.—Puerperal Diseases.															
1. Puerperal Septicæmia	8	..	5	2	..	..	..	1	..	..	..	..	1	..	17
2. Puerperal Albuminuria and Convulsions	4	4	6	2	..	..	..	..	1	..	..	..	..	..	17
3. Other accidents of pregnancy, sudden death	10	..	1	..	2	1	..	..	..	..	..	..	3	..	17
4. Puerperal Disease of the Breast	....	..	....	..	..	..	..	..	..	..	..	..	..	..	.....
IX.—Diseases of the Skin and Cellular Tissue.															
1. Erysipelas	10	1	2	2	..	..	..	1	..	..	..	..	..	..	16
2. Other Diseases of the Skin and its Adnexa (Cancer excepted)	....	..	....	..	..	..	..	..	..	..	..	..	..	..	.....
X.—Diseases of the Locomotor System.															
1. Pott's Disease	1	..	....	..	..	..	..	..	..	..	..	..	..	1	2
2. Diseases of Bones and Joints	1	1	1	3	..	..	..	..	..	..	..	1	..	1	8
3. Amputation (for unspecified Disease)	....	..	....	..	..	..	..	..	..	..	..	..	..	..	....
XI.—Malformations, Diseases of Infancy, Diseases of Old Age.															
1. Still-Births	175	48	94	26	7	24	9	7	7	6	6	12	4	4	429
2. Congenital Debility and Malformations	316	82	149	33	23	21	3	14	12	7	14	11	12	12	709
3. Other Diseases of Infancy	5	1	2	1	..	1	..	..	..	..	..	..	..	..	10
4. Senile decay	213	46	67	58	57	31	20	8	9	11	21	18	7	13	579
XII.—Suicide.															
1. Poison	3	..	....	..	1	..	..	..	1	..	1	2	..	1	9
2. Strangulation	1	..	....	..	..	..	..	..	..	..	..	..	..	..	1
3. Gas poisoning	....	..	....	..	..	..	..	..	..	..	..	..	..	..	.....
4. Drowning	....	1	....	..	..	..	..	..	..	..	..	..	..	..	1
5. Firearms	2	..	....	..	..	..	..	..	..	..	..	..	1	..	3
XIII.—Accident.															
1. Fractures and Dislocations	45	7	9	6	6	2	7	2	7	2	1	2	2	3	101
2. Gunshot	5	1	1	..	..	..	..	..	1	..	2	..	..	..	10
3. Lightning	....	..	....	..	..	..	..	..	..	..	..	..	..	..	.....
4. Drowning	12	2	10	..	2	..	1	..	1	2	..	2	..	..	32
